

# 2|Compare PPT

The visual PowerPoint comparison

2|Compare PPT is a software for visual comparison of PowerPoint presentations. By drag & drop, up to 5 presentations can be loaded into the desktop at the same time. With the help of automatic alignment, comparable slides are placed next to each other. This gives the user a very quick overview of the presentations structure. For direct comparison of two slide decks, the user selects a comparison presentation against the reference presentation and then starts the comparison algorithm. The result of this analysis marks all deviations from the reference document in the comparison document. The comparison result also includes slide notes and hidden slides in the comparison.

If necessary, the detected deviations can be corrected in the comparison document as well as in the reference document. To do this, the user opens the respective original file in PowerPoint from the 2|Compare software and enters his changes. After saving the changes in PowerPoint, the changed file is also updated in the comparison software, so that the result of the correction can be checked immediately with 2|Compare PPT.

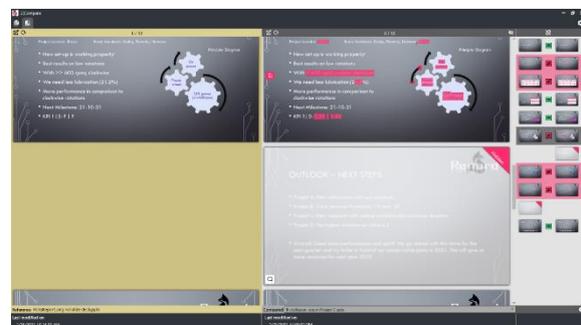

## Software features

- Visual comparison of up to 5 PowerPoint presentations simultaneously
- Drag & drop to load the files
- Automatic slide alignment
- Scrollable presentation preview
- Display important file information like "last modified"
- Display and comparison of hidden slides
- Display and comparison of slide notes
- Animated overlay function reveals all differences
- Direct link to open and modify the presentations

## Use cases

### Digital collaboration

A presentation on which several people are working at the same time changes continuously. Unfortunately, the latest changes can often not be made clearly visible at a glance. 2|Compare PPT shows you every content or graphical change between the original and the comparison presentation in detail.

### Version tracking

Presentations also have a life cycle and change over time: a new dash here, a different image there and the error in the notes of the penultimate slide has finally been corrected! But which is the last and which is the most complete version? Searching for the answer to these questions can cost you many valuable hours. 2|Compare PPT shortens your tedious search by showing all changes, even in hidden slides and the slide notes.

### Quality control

Is the company logo in the right place and are all slide notes deleted before the sales presentation goes out to the customer? No matter if graphic element, hidden slide or notes, 2|Compare PPT unerringly detects all changes and thus underpins the high quality of your work.

## System requirements

	Minimal	Recommended
Processor	1 GHz 32-Bit (x86) or 64-Bit (x64) processor	2.8 GHz or higher 32-Bit (x86) or 64-Bit (x64) Prozessor
Memory	4 GB RAM	8 GB RAM
Operating system	Windows 7/8/10 Windows Server 2008/2012/2016/2019	Windows 10 Windows Server 2008/2012/2016/2019
Additional software	Microsoft Office 2013 or later	
Free hard drive memory	300 MB	500 MB
Display resolution	1024x768 Pixel	1920x1080 Pixel
Internet	Internet connection for software activation
